

FINISTERRA SUSTAINABLE HOME OFFICE

B
INTERIOR DESIGN, Inc.

Traditional touches enliven this home office which incorporates modern technology, fulfilling the client's request that he be able to conduct personal business, surf the web, watch television or read.

Executing this request without altering the architecture of the Mediterranean-style home was a

challenge. Located in the desert, western exposure, wall-to-wall windows and the associated issues of heat gain, glare and light control had to be addressed.

Working within the parameters of existing conditions, the desk and credenza were placed perpendicular to the window wall and bridged directly under the window. Window film was installed to reduce glare on computer monitor and televi-

sion screens and mitigate solar heat gain. Cherry wood blinds allow maximum light control.

Floors, walls and ceilings are covered in serene shades of green. Warm cherry wood, attention to architectural design details, a wingback chair and bookshelves establish the timeless quality of a gentlemen's library.
